

Creation of a Session for Python Boto3 Scripts

- Session:
 - A Boto3 Session is like logging into the AWS Management Console
 - Boto3 Session tells to your AWS Account who you are and what permissions you have
 - Boto3 Session uses your credentials(profile) or IAM Roles to talk to your required AWS Account
 - We can create either a **client** or **resource** for your AWS Service(s) from Session
- We can create session from
 - `boto3.Session()`
 - Or
 - `boto3.session.Session()`

```
session = boto3.Session(  
    aws_access_key_id='AKIAQD4EUQEZUEOC365X',  
    aws_secret_access_key='vJTU8GuTjed0ce/07xtRpVe9NNRbL/+9caot/QKW',  
    region_name='us-east-1' # Change to your preferred region  
)
```

- Or

```
session = boto3.Session(profile_name='dev', region_name='us-east-1')
```
