

Introduction to Boto3 Read Operations for Single AWS Resource

- The boto3 supports full CRUD operations across all AWS services
- CRUD Means : C-Create, R-Read, U-Update & D-Delete
- Here, We are taking about Read Operations
- Boto3 read operations are useful for resource discovery and inventory management in AWS
- We can execute Read Operations
 - single AWS Resource (like one IAM User, one IAM Policy, one S3 Bucket, one EC2 Instance)
 - Multiple AWS Resources (like IAM Users, IAM Policies, S3 Buckets, EC2 Instances)

Boto3 Core Concepts

Boto3 Read Operations for single AWS Resource

- Single AWS Resource Mean like : One IAM User, One IAM Policy, One EC2 Instance, One Key-Pair...
- Notes:
 - Client Operations:
 - Read Operations are identified with get/list/describe... keys
 - Client Read Operation returns result as a dictionary/JSON Data
 - So, we need dictionary operations to parse result
 - Resource Operations:
 - Read operations are directly with Identifiers and Attributes
 - Resource Read Operation returns result as an object
 - So, we need object operations or dot operations to parse result
