

Boto3 Read, Update & Delete Operations for single AWS Resource

- Single AWS Resource Mean like : One IAM User, One IAM Policy, One EC2 Instance, One Key-Pair...
- Notes:
 - Client Operations:
 - Read Operations : get/list/describe ...
 - Update Operations : update/modify ...
 - Delete Operations : delete/remove/terminate ...
 - Client RUD Operations return results as a dictionary/JSON Data
 - So, we need dictionary operations to parse result
 - Resource Operations:
 - Read operations are directly with Identifiers and Attributes
 - Update and Delete Operations are executed with Actions
 - Execute all Operations as dot operation on created object
