

Boto3 Update and Delete Operations for Unknown Multiple AWS Resources

- Unknown Multiple AWS Resources Means – We don't know the Name's or ID's before developing the script
- A condition must be provided in order to execute update or delete operations like
 - Update/Delete all Resources ?
 - Update/Delete all Resources based on any filter condition like tags/state/prefix/pathprefix/?
- Script: Develop EC2 Instances Control Script to start/stop/reboot/terminate for the instances where tag key is projectname and value is payments
- We already know “how to find or list or get or discover unknown multiple AWS Resources for a given condition ? “
- So, Always execute Read Operations for Unknown multiple AWS Resources for given condition before executing Update/Delete Operations
- Example: EC2 Instances Control Script for projectname payments (Based on tags)
